

CARBON REDUCTION STATEMENT

OUR COMMITMENT

We are extremely proud to be a certified Climate Positive Practice which is the first step on our journey to achieving our long-term target of Net-Zero carbon emissions by 2050.

Our Carbon Reduction Policy is currently in development and will be published over the next 6 months setting out exactly how we expect to achieve both our short-term Climate Positive and long-term Net Zero goals.

In order to achieve this, we are striving as a Practice to reduce our greenhouse gas (GHG) protocol scope 1, 2 and 3 carbon emissions wherever possible and in line with the goals set within the Paris Climate Agreement. Transport is the largest contributor to the UK's greenhouse gas emissions and the Government has recognised that transport plays a critical role in achieving net zero. Many local authorities have set ambitious targets to achieve net-zero emissions by 2030/2050. Furthermore, we recognise that many of our clients have also made those same commitments to ambitious science-based targets with a view to achieving net-zero emissions by 2050.

We are able to help our clients work towards and achieve their own goals to reduce their transport related carbon emissions through our work which is focussed on promoting sustainable travel and ensuring that steps to achieve mode shift are at the very heart of our advice and at the very heart of new development schemes. This is in addition to advising our clients/supply chain on how they can work towards their own Net-Zero goals.

We are currently reviewing our own scope 1, 2 and 3 emissions to understand where we can make the greatest impact as a Practice and how we can work together and with our supply chains to ensure we are responsible in our day-to-day operations, as well as to work with our clients as part of their supply chains to ensure the advice we give is cognisant of our clients' wider goals carbon reduction goals.

Within our business we strive to avoid unnecessary carbon-intensive activities and to make simple changes to avoid the use of single-use plastics and other unnecessary items during our day-to-day activities as well as to reduce unnecessary carbon emissions by undertaking our operations more efficiently. This means we educate and encourage individuals across i-Transport LLP to make conscious choices as well as work with our suppliers to ensure a conscious supply chain. The next step of our approach focusses on replacing high-carbon activities with low-carbon activities where these are integral to our business and, lastly, we commit to only investing in verified Gold Standard carbon offsetting and removal schemes, through UK based partners, to compensate the emissions associated with our Practice and in the longer term, to offset those carbon emissions that cannot be reduced in line with the Science Based Targets approach.

If you would like to understand more about our Climate Positive approach and development of our Net-Zero Policy, or how we can help you to move closer to your own carbon reduction goals, please get in touch.
